

Instructions for new Single Action Foot Switch (FS007RJ11) & Triple Foot Switch (FS007TAF) for use with Kinesis® Contoured™ keyboards

Connecting foot switch: Connect the telephone-style pigtail on your keyboard's main cable to the matching couple that came with your foot switch (Figure 1, arrow).

Default action:

The default action will be to activate the embedded keypad layer of your keyboard (“*Keypad Shift*”). If you purchased a Kinesis 3-position splitter (FS011FS3) or a mounted Triple Foot Switch (FS007TAF), the left position or pedal will perform “keypad shift,” the middle will perform “keypad Enter,” and the right will perform “Shift.”

Anchoring the single foot switch:

If you have individual pedals, you may find your foot switch easier to use if it is anchored to the floor or to a flat plate with the provided velcro. If you are working on carpet, just use the “hook” side of the velcro attached to the bottom of the foot switch.

Customizing foot switch actions:

These foot switches may perform any action that a key can perform on your Kinesis Advantage keyboard, using the On-board™ programming feature. Program a new action to the foot switch the same way used to program a key. The bottom of your keyboard has simple programming instructions. See your keyboard's User's Manual for details.

Adding additional foot switches (FS007RJ11 or FS007TAF):

If you wish to choose between different actions with a single foot switch, or (more commonly) connect two or three single foot switches at once, you may purchase a special 3-position splitter from Kinesis (AC011FS3, \$14.95). The three positions on the splitter perform *Keypad Shift*, *Shift*, and *Keypad Enter*.

Alternatively, you may purchase three foot switches mounted to a steel base (FS007TAF, \$99), shown in Figure 2. This product does not require the special splitter.
